

## Associate QA Engineer

### WHO WE ARE:

GEP delivers transformative supply chain solutions that help global enterprises become more agile and resilient, operate more efficiently and effectively, gain competitive advantage, boost profitability and increase shareholder value.

A leader in multiple Gartner Magic Quadrants, GEP's cloud-native software and digital business platforms consistently win awards and recognition from industry analysts, research firms and media outlets, including Gartner, Forrester, IDC and Spend Matters. GEP is also regularly ranked a top supply chain consulting and strategy firm, and a leading managed services provider by ALM, Everest Group, NelsonHall, IDC, ISG and HfS, among others. Headquartered in Clark, New Jersey, GEP has 21 offices and operations centers across Europe, Asia, Africa and the Americas.

### Hit the Ground Running with GEP, a Leading Global Technology Firm.

### Responsibilities:

- Research, evaluate and use new and innovative products and technologies and solutions in the Procurement / Supply Chain industries.
- Execute on the strategic vision, using technologies required to ensure delivery of quality software for the company Product platforms.
- Drive and document test strategies, design test cases, and conduct manual and automated testing for various features across all platforms and technology layers: UI, API, Database.
- Perform manual testing of software products and document any defects found during testing.
- Conduct regression testing after defects have been found and fixed.
- Aid in the creation and execution of test cases to detect defects early in the development cycle.
- Drive quality engineering efforts on agile teams, and oversee bug tracking, test prioritization, tests automation, maintaining and improving automation test scripts.
- Provide input for product quality improvement based on testing results.
- Participate in regular status meetings with the team and provide updates on testing progress
- Work with Devops and other engineering leaders across all engineering to apply a test automation strategy to test case execution; ensure CI/CD pipeline key integration to drive product quality.
- Develop & manage the version control documents and Release notes/plans.

### Skills & Requirements:

- Bachelor's degree in Computer Science or relevant experience –it's important to know the fundamental theories that guide a proficient developer, but we definitely appreciate even more hands-on experience
- Understanding of software development processes and methodologies., understanding technologies like .Net Core, Entity Framework, SQL Server databases or non-Relational is a plus.
- Experience in manual software testing.
- Familiarity with Agile development methodology
- Experience in testing with Cypress is a plus.
- Experience with test automation tools such as Selenium WebDriver, Cypress
- Experience with Angular or any of the JS frameworks is desirable but not mandatory.
