

3rd IAHR Young Professionals Hydro-Environment Challenge

On behalf of the Organising committee, we would like to invite students/young professionals to take part in the **3rd edition of the Young Professionals Hydro-Environment Challenge of the International Association for Hydro-Environment Engineering and Research** (IAHR), which seeks to promote international and interdisciplinary collaboration among young professionals and academics working at institutions across the globe in the hydro-environment field. This event attracts practitioners and academics in the hydro-environment field.

The Young Professionals Hydro-Environment Challenge is an open contest (participation is free of charge). The next edition will take place between March and June 2023, for a total workload of around **50 hours over 10 weeks**. During this time the participants will interact with their fellow participants as well as with IAHR coaches and technical mentors, aiming to solve **three technical challenges, focusing on ecohydraulics, experimental data, and fluvial hydraulics**. A jury made up of senior IAHR members and representatives from industry partners evaluates the teams. The best groups will have the opportunity to be recognized for their accomplishment and receive an award during the 40th IAHR World Congress in Vienna, Austria, in August 2023.

The deadline for applications is open until: **15 February 2023!**
